

ONYX AQUAFLOW 1333

DESCRIPTION

AQUAFLOW 1333 is an anionic polyacrylamide emulsion.

APPLICATION

AQUAFLOW 1333 is primarily used as a water injection flow improver. It should be injected directly into the flowing stream at typically 10 to 30 ppm. AQUAFLOW 1333 can increase the flow rates while maintaining current operating pressures or maintaining flow while lowering operating pressures. This can not only lead to benefits in energy consumption and maintenance, but it can also prevent or delay capital expenditure on resized pipes or pumps, for example.

TYPICAL PROPERTIES

Appearance: Opaque liquid

Specific Gravity @ 20°C: 1.02 - 1.08

pH 5%: 6.0 - 8.0

Viscosity @ 25°C: >250 cP

Flash Point: >61°C
